OVERVIEW AND TECHNICAL NOTES

ILLINOIS COUNTY CANCER STATISTICS REVIEW

INCIDENCE, 2017 – 2021

OVERVIEW

This report presents cancer incidence in Illinois' 102 counties for 2017 through 2021. The first two sections of the report include tables designed to facilitate county comparisons. County-specific tables with expanded cancer sites are included in Section III for all races. Cancer incidence data for Whites and Blacks are included in Section IV for 15 counties - Champaign, Cook, DuPage, Kane, Kankakee, Lake, Macon, Madison, Peoria, Rock Island, Sangamon, St. Clair, Vermilion, Will, and Winnebago. These counties have sufficiently large Black populations to allow meaningful statistics for the race group. Cancer incidence for Hispanics (of any race) and non-Hispanics (of any race) are included in Section V for five counties (Cook, DuPage, Kane, Lake, and Will) that have sufficiently large Hispanic populations to allow meaningful statistics for the ethnicity group. Details for each section follow.

Section I. Tables containing five-year aggregate incidence counts, average annual age-adjusted rates and lower- and upper-95% confidence intervals are presented for all sites combined; oral cavity and pharynx; colon and rectum; lung and bronchus; melanoma of the skin by sex, race, and Hispanic ethnicity (selected counties); and for female breast invasive and *in situ*, cervix and prostate by race and Hispanic ethnicity (selected counties). These sites were chosen based on two considerations: 1) the need to facilitate evaluation of various cancer prevention and control programs, and 2) a sufficient number of cases to allow meaningful presentation of rates.

Section II. Stage at diagnosis of cancer for counties is expressed as percentage localized, regional, distant, and unstaged for cancers of the oral cavity and pharynx (both sexes); colon and rectum (both sexes); melanoma and the skin (both sexes); and for invasive cervix and prostate. Female breast cancer incidence data are displayed with *in situ* stage in addition to localized, regional, distant, and unstaged stage categories. Data by race and Hispanic ethnicity are available for the selected counties.

Section III. In separate tables for each of the state's counties, cancer incidence data are presented for all sites combined, the sites in Sections I-II, as well as additional cancer sites included in the county-level public data set for 2017 – 2021. Since the incidence for female breast cancer *in situ* is highly correlated with mammography screening usage, it also is reported in the section. All tables in the section contain five-year aggregate incidence counts, average annual age-adjusted rates, and lower- and upper-95% confidence intervals for each cancer site by sex category for all races.

Section IV. For the 15 above-mentioned counties with sufficiently large Black populations, tables in the same format as Section III are presented for Whites and Blacks.

Section V. For the five above-mentioned counties with sufficiently large Hispanic populations, tables in the same format as Section III are presented for Hispanics (of any race) and non-Hispanics (of any race).

TECHNICAL NOTES

Data Sources

Cancer Incidence

Cancer incidence data are from the Illinois Department of Public Health's Illinois State Cancer Registry (ISCR), which is the only source of state population-based cancer incidence data. Identification of cancer cases in the ISCR is dependent upon reporting by hospitals, free-standing clinics, radiation treatment facilities, laboratories, and physician offices, as mandated by state law. All newly diagnosed cancer cases among Illinois residents are reported to ISCR by these reporting sources. In addition, ISCR has agreements with other central registries to exchange Illinois cancer cases identified outside of the state. These registries include Arkansas, California, Florida, Indiana, Iowa, Kentucky, Michigan, Mississippi (beginning in August of 2004), Missouri, North Carolina, Washington, Wisconsin, Wyoming (beginning in February 2008), and the Mayo Clinic in Minnesota (beginning in October 2005).

Completeness of out-of-state reporting depends upon the years of operation of these other central registries, the extent of their identification of out-of-state residents, and their standards of quality.¹ For data used in this publication, approximately 6% of ISCR cases were reported from out-of-state central registries.

A death certificate clearance process has been employed since August 1993. The process involves follow back of cancer deaths in an effort to identify the cases not reported to ISCR. Between 2017 and 2021, 1.5% of reported cases were identified from death certificate clearance.

The preparation and release of data used for this report is dependent on the completion of annual reporting by Illinois facilities. Although case reporting is mandated within six months of diagnosis, it has been the ISCR policy to keep database files open for late reporting of cases and to allow for the two- to four-year lag in case identification of Illinois residents from other state central cancer registries. This practice is consistent with data published nationally. For this report, the database files reflect the status of ISCR as of November 2023.

Data Use Agreement

By using these data contained in this report, you signify your agreement to comply with the following statutorily based requirements. The Illinois Health and Hazardous Substances Registry Act (410 ILCS 525/12) provides data collected by the Illinois State Cancer Registry be made available to the public; however, the identification or contact of individuals is prohibited.

In an effort to exclude identifying information on individual patients, the data (e.g., age, race, Hispanic ethnicity, year of diagnosis, and type of cancer) have been reported in aggregate categories, the number of which depends on the size of the geographic area.

These data are provided as a public service for the purpose of statistical reporting and analysis only. There should be no attempt to learn the identity of any person included in these data. If the identity of any person is discovered inadvertently, no disclosure or other use of the identity will be made. Uses of these data do not constitute an endorsement of the user's opinion or conclusions by the Illinois Department of Public Health, and none should be inferred.

Population Estimates

Age-, sex-, and race/ethnicity-specific population counts for Illinois and Illinois counties for each year were obtained from the Vintage 2020 bridged-race postcensal population estimates files. Some population estimates were calculated by Woods & Poole Economics, Inc. for the National Cancer Institute (NCI) released prior to the U. S. Bureau of Census Population Estimates Program (<http://www.census.gov/programs-surveys/popest.html>), scheduled to be released in fall 2024 ([U.S. County Population Data 1969-2022 - SEER Population Data \(cancer.gov\)](https://seer.cancer.gov/popdata)).² The population estimates incorporate intercensal (for 2000-2009 from Census Bureau and 2010-2019 from Woods & Poole) and Vintage 2020 (for 2020-2021) bridged race estimates are derived from the original multiple race categories in the 2000, 2010, and 2020 censuses (as specified in the 1997 Office of Management and Budget standards for the collection of data on race and ethnicity). The bridged single-race estimates and a description of the methodology used to develop them appear on the National Center for Health Statistics website (http://www.cdc.gov/nchs/nvss/bridged_race.htm). For more information on the modifications to county population categorized for each decade, visit <https://seer.cancer.gov/popdata/modifications.html>.

The intercensal estimates from Woods & Poole Economics align with the anticipated Census Bureau's 2010-2020 intercensal estimates methodology (<https://www2.census.gov/programs-surveys/popest/technical-documentation/methodology/intercensal/2000-2010-intercensal-estimates-methodology.pdf>) ([Woods & Poole Economics, Inc. 2010-2020 County Intercensal Estimates \(cancer.gov\)](https://seer.cancer.gov/popdata)).^{2,3} Population estimates utilized prior to the availability of the 2010 census data were prone to increased error as the time from the actual 2000 census increased. At the national level, estimates using both the 2000 census and the 2010 census

are not very different from the previous estimates. However, there are more substantial differences at the state and county levels that may result in changes to cancer incidence rates when one compares this report to earlier versions. In addition, differences in incidence rates may not solely be the result of changes in population estimates. Changes in rates also could be attributable to the addition of cases reported late.

Definitions

Cancer Incidence Sites

All cases diagnosed during 2017 through 2021 were reported with *The International Classification of Diseases for Oncology* version 3 (ICD-O-3) codes.⁴ Cancer sites in this report were grouped according to site group definitions established by the Surveillance Epidemiology and End Results (SEER) program of NCI⁵ and are used also by the North American Association of Central Cancer Registries (NAACCR). These standardized classification schemes allow direct comparisons of Illinois data with international, national, and state publications.⁵⁻⁷ The ISCR cancer site groups used in the county tables are listed in Appendix B.

Beginning with the 1998-2002 report and continuing through this year's report, both Kaposi sarcoma and mesothelioma were classified as separate site groups. Compared to the previous site grouping method, this change had a slight impact on cancer incidence rates for a few specific cancers. However, due to small numbers of cases at the county level, these two sites are not shown in this report.

When comparing this report to the ones published before the 2001-2005 county report, it should be noted that several cancers that previously were not coded as malignant in ICD-O-2 (used in diagnoses prior to 2001) are coded as malignant in ICD-O-3 (beginning with 2001 diagnoses). For example, myelodysplastic syndrome (MDS) and chronic myeloproliferative disease (CMPD) are considered malignant cancer in ICD-O-3, so are papillary ependymomas and papillary meningiomas which, according to ICD-O-3, are included in the "brain and other nervous system" and "all sites" categories. Some endometrial tumors also are classified as malignant in ICD-O-3. Conversely, some low malignant potential tumors of the ovary and pilocytic astrocytomas are no longer coded as malignant in ICD-O-3. Because of the way cancers are grouped in this report, these changes have a slight or small impact on incidence of a specific cancer site; however, it might result in a noticeable increase in cancer incidence rates for "all sites" or for "all other sites."

The ICD-O-3 recode with adjustment for WHO 2008 hematopoietic histologies were first used in the 2006-2010 report and continue to be used in subsequent reports. SEER-NCI recommends this site recode scheme (Site Recode ICD-O-3/WHO 2008) be used for any data containing cases diagnosed in 2010 or later years. In the interests of comparability to other national, state, and registry specific data, subsequent versions of this report containing cases diagnosed in 2010 or later will use the SEER Site Recode ICD-O-3/WHO 2008.

Counts and rates were calculated only for invasive cancers except for carcinoma *in situ* occurring in the urinary bladder. Counts and rates for carcinoma *in situ* of the breast are displayed separately in tables but were not included in the calculation of counts or incidence rates for all sites combined.

Incidence Rates

Rates are expressed per 100,000 population and are age-adjusted by the direct method to the 2000 U.S. standard million population. The SEER*Stat® software package, developed by Information Management Services Inc. for the NCI, was used to calculate average annual age-adjusted cancer incidence rates for 2017 – 2021.⁸ Rates are rounded to the nearest 10th and very small rates (e.g., 0.04) are shown as 0.0. Rates are presented with the lower and upper confidence intervals computed at the 95% level using Tiwari method.⁹ The formulas for rate calculations are displayed in Appendix C.

Race Categories

The race-specific categories in this report are all races for Illinois and all 102 counties. Data for Whites and Blacks are presented for Illinois and 15 counties (Champaign, Cook, DuPage, Kane, Kankakee, Lake, Macon, Madison, Peoria, Rock Island, St. Clair, Sangamon, Vermilion, Will, and Winnebago) with sufficient Black population estimates and annual cancer incidence for Blacks to allow for stable statistics. Cases reported as “other” or “unknown” race are included in the “all races” category.

To improve the identification and surveillance of American Indians and Alaska Natives diagnosed with cancer and to be consistent with the national data, cancer incidence data since 1995 were linked to the Indian Health Service (IHS), which provides medical services to an estimated 55% of the American Indian/Alaska Native population nationally.¹⁰ If a race code in the ISCR database is White, Black, other, or unknown and the IHS link is positive, then the race code is re-categorized to American Indian/Alaskan Native, otherwise the race code stays unchanged. This practice had minimal impact on the incidence rates for Whites or Blacks due to the small number of cases affected.

Hispanic Ethnicity Categories

Through the use of the NAACCR Hispanic identification algorithm (NHIA) improvements have been made in classifying cases as Hispanic or Latino for diagnosis years 1990 through 2021.¹¹ NHIA is a generally reliable method to enhance the ethnic identification of the Latino population in the United States.¹² Cases that meet certain criteria around race and birthplace, and who are also identified as non-Hispanic, Hispanic not otherwise specified, Spanish surname only, and unknown ethnicity are examined. Using race, birthplace, last name, first name, and maiden name, NHIA assigns a more specific and sometimes different ethnicity to these cases.

The Hispanic ethnicity-specific categories are presented in this report for Illinois and

five counties (Cook, DuPage, Kane, Lake, and Will) with sufficient Hispanic population estimates and annual cancer incidence for Hispanics to allow meaningful statistics. To be consistent with national data, cases reported as “unknown” ethnicity are included in the non-Hispanic category.⁵⁻⁷

Quality Control

Ongoing quality control procedures are integral components of ISCR operations that assure high quality cancer incidence data.¹³ In 1997, NAACCR developed a certification process that reviews registry data for completeness, accuracy, and timeliness of reporting (starting with cases diagnosed in 1995). ISCR has submitted data each year to the NAACCR for registry certification. Based on the certification criteria shown in the following table, ISCR has been awarded gold certification for every diagnosis year from 1996 through 2021. The table below shows the criteria used for silver and gold certification.

Completeness (NAACCR Method)	Pass EDITS	DCO	Timeliness	Unresolved Duplicate	Missing Data Fields				Certification Status
					Sex	Age	County	Race	
≥ 90%	≥ 97%	≤ 5%	Within 23 months	≤ 2/1000	≤ 3%	≤ 3%	≤ 3%	≤ 5%	SILVER
≥ 95%	100%	≤ 3%	Within 23 months	≤ 1/1000	≤ 2%	≤ 2%	≤ 2%	≤ 3%	GOLD

Constantly updating registry data is a standard operation in ISCR. As of November 2023, ISCR quality control data for the diagnosis years considered in this report (2017 – 2021) are as follows:

Year	Completeness (NAACCR Method- As of 11-23)	Pass EDITS	DCO	Unresolved Duplicate Per 1,000	Missing Data Fields			
					Sex	Age	County	Race
2017	100%	100%	1.9%	0.6	0.0%	0.0%	0.0%	0.8%
2018	100%	100%	1.4%	0.7	0.0%	0.0%	0.0%	1.4%
2019	100%	100%	0.9%	0.2	0.0%	0.0%	0.0%	1.5%
2020	100%	100%	1.2%	0.2	0.0%	0.0%	0.0%	1.3%
2021	100%	100%	1.2%	0.0	0.0%	0.0%	0.0%	1.4%

Data Interpretation

Observed differences in cancer incidence among counties may reflect differences in risk factor modifications or consequences of screening and early detection programs within the county. However, county cancer incidence differences also could be the result of other factors. Any conclusions should be made only after carefully considering the following factors that influence the average annual age-adjusted cancer incidence rates:

- Aggregate cancer case counts for 2017–2021 produce more stable age-adjusted cancer incidence rates than those calculated for an individual year. Counties with smaller populations and smaller numbers of cancer incidence cases will still have less stable age-

adjusted rates than larger counties or the entire state. Where the number of cases is less than or equal to 16, the relative standard error for the rate in these instances is equal to or exceeds 25%. At this level, interpretation of the rate is limited by excessive uncertainty and these rates should be evaluated cautiously.

- The 95% confidence intervals are included with reported rates to help put the rate in perspective and to facilitate county comparisons. Observed differences may not be statistically significant. The range between the lower confidence interval and the upper confidence interval defines with 95% probability where the “true” rate for the county or the state may fall. The comparison of two sets of confidence intervals is approximately equivalent to statistical significance tests for differences between two county rates and is more conservative than the standard significance test when the null hypothesis is true.¹⁴
- Population estimates used for denominators may be inaccurate. These data are estimates based on demographic characteristics of the population rather than actual counts. Incidence rates produced using these population estimates would be expected to exhibit more error than those calculated using 2010 census population counts. Also, keep in mind when comparing this report to earlier versions, the methods for developing the population estimates have changed and denominator data will lack comparability. Ensuring the same estimate methods (e.g., revised intercensal estimates and Vintage 2020) are used across the time period being examined accounts for this issue.

Cancer Incidence Counts and Age-adjusted Rates by County and Sex

All Races, All Sites, Illinois, 2017-2021

Figures include invasive cancer and bladder cancer in situ. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method. DATA SOURCE: Illinois Department of Public Health, Illinois State Cancer Registry, data as of November 2023

Cancer Incidence Counts and Age-adjusted Rates by County and Sex

Black, All Sites, Illinois, 2017-2021

Figures include invasive cancer and bladder cancer in situ. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method. DATA SOURCE: Illinois Department of Public Health, Illinois State Cancer Registry, data as of November 2023

Cancer Incidence Counts and Age-adjusted Rates by County and Sex

White, Colon and Rectum, Illinois, 2017-2021

Figures include invasive cancer and bladder cancer in situ. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method. DATA SOURCE: Illinois Department of Public Health, Illinois State Cancer Registry, data as of November 2023

Cancer Incidence Counts and Age-adjusted Rates by County and Sex

All Races, Lung and Bronchus, Illinois, 2017-2021

Figures include invasive cancer and bladder cancer in situ. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method. DATA SOURCE: Illinois Department of Public Health, Illinois State Cancer Registry, data as of November 2023

Cancer Incidence Counts and Age-adjusted Rates by County and Sex

All Races, Melanoma of the Skin, Illinois, 2017-2021

Figures include invasive cancer and bladder cancer in situ. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method. DATA SOURCE: Illinois Department of Public Health, Illinois State Cancer Registry, data as of November 2023

Cancer Incidence Counts and Age-adjusted Rates by County

Female Breast (invasive), Illinois, 2017-2021

Figures include invasive cancer and bladder cancer in situ. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method. DATA SOURCE: Illinois Department of Public Health, Illinois State Cancer Registry, data as of November 2023

Cancer Incidence Counts and Age-adjusted Rates by County

Female Breast (in situ), Illinois, 2017-2021

Figures include invasive cancer and bladder cancer in situ. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method. DATA SOURCE: Illinois Department of Public Health, Illinois State Cancer Registry, data as of November 2023

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Fayette

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, All Races, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, White, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, White, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, Black, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, Black, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, Black, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, Non-Hispanic, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

Cancer Incidence Counts and Five-year Age-adjusted Rates by Sex

All Sites Combined and Selected Sites, Hispanic, 2017-2021

Figures include invasive cancer with the exception of urinary bladder (includes in situ) and breast cancer in situ as a separate category. Incidence counts are five-year totals. Rates are per 100,000 age-adjusted to the 2000 U.S. standard million population. Lower confidence intervals (LCI) and upper confidence intervals (UCI) are 95% for rates, Tiwari method.

APPENDIX C

Formulas for Rates

Age-Adjusted Rate

An age-adjusted rate is a weighted average of crude rates, where the crude rates are calculated for different age groups and the weights are the proportions of persons in the corresponding age groups of a standard population. The standard populations used for this report is the U.S. populations 2000. The age-adjusted rate for an age group comprised of the ages x through y is calculated using the following formula:

$$aarate_{x-y} = \sum_{i=x}^y \left[\left(\frac{count_i}{pop_i} \right) \times 100,000 \times \left(\frac{stdmil_i}{\sum_{j=x}^y stdmil_j} \right) \right]$$

where $count_i$ is the number of cases for the i th age group, pop_i is the relevant population for the same age group, and $stdmil_i$ is the standard population for the same age group.

Standard Error for an Age-Adjusted Rate

This calculation assumes that the cancer counts have Poisson distributions. Suppose that the age-adjusted rate is comprised of age groups x through y.

$$SE_{AARate} = \left[\sum_{i=x}^y \left(\frac{stdmil_i}{\sum_{j=x}^y stdmil_j} \right)^2 \times \left(\frac{count_i}{population_i} \right) \right]^{1/2} \times 100,000$$

Age-Adjusted Rate Confidence Intervals

Suppose that the age-adjusted rate is comprised of age groups x through y, and let:

$$w_i = \frac{stdmil_i}{\left(pop_i \times \sum_{j=x}^y stdmil_j \right)}$$

$$v = \sum_{i=x}^y \left(w_i^2 \times count_i \right)$$

The endpoints of a $p \times 100\%$ confidence interval are calculated as:

$$CI_{low} = \left(\frac{v}{2 \times rate} \right) \times \left(ChiInv \left(\frac{p}{2}, \frac{(2 \times rate^2)}{v} \right) \right) \times 100,000$$

$$CI_{high} = \left(\frac{v}{2 \times rate} \right) \times \left(ChiInv \left(1 - \frac{p}{2}, \frac{(2 \times rate^2)}{v} \right) \right) \times 100,000$$

This method for calculating the confidence interval was initially developed by Fay and Feuer (1997) and further modified by Tiwari et al. (2006) on the algorithm for the upper confidence limit. The method produces similar confidence limits to the standard normal approximation when the counts are large and the population being studied is similar to the standard population. In other cases, the above method is more likely to ensure proper coverage.
