

Illinois' Progress towards NHAS 2020 Goals

Prepared by Patricia Murphy

October 26, 2020

1

National HIV/AIDS Strategy (NHAS)

- Guides national response to HIV epidemic in US
- Goals include:
 - Prevent new HIV infections
 - Improve outcomes along Care Continuum
 - Reduce disparities among those most impacted by HIV
- Indicators to measure progress

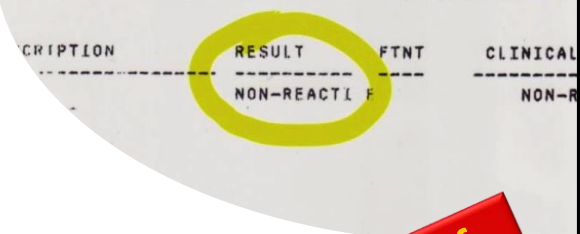

2

Measurement
Estimated % of PLWHA in IL aware of serostatus

Data Source
CDC HIV Surveillance Supp. Report 2020; 25(No. 1), 2018 prevalence
Note: latest report has significantly different values for previous years so all targets/measures adjusted accordingly

Baseline Data
87.2%; 2014 prevalence

Indicator 1: Increase percentage of people living with HIV who know their serostatus to ≥ 90%

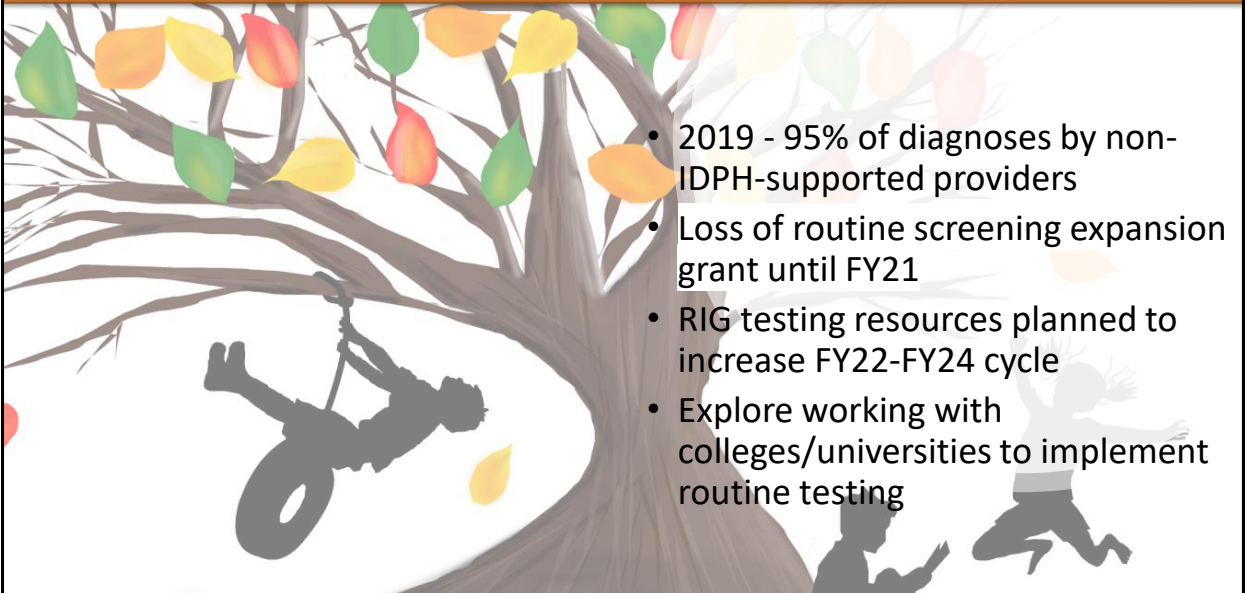

3

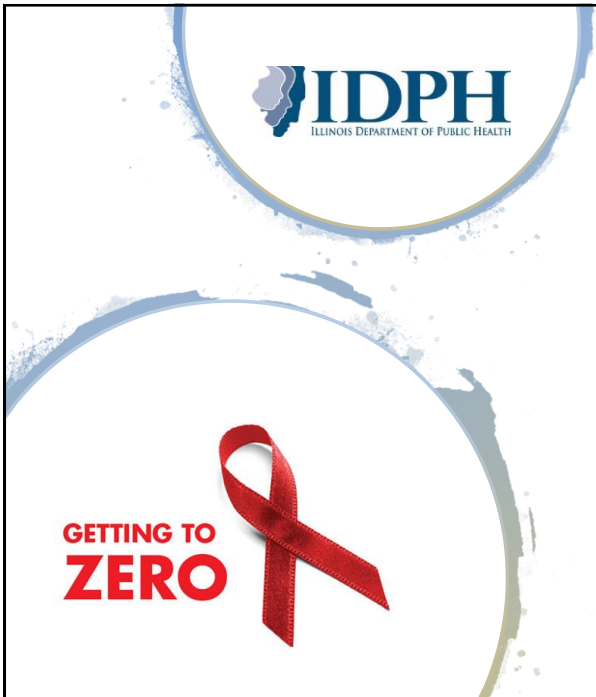

4

Indicator 1 – Points of Consideration

- 2019 - 95% of diagnoses by non-IDPH-supported providers
- Loss of routine screening expansion grant until FY21
- RIG testing resources planned to increase FY22-FY24 cycle
- Explore working with colleges/universities to implement routine testing

5

Indicator 2: Decrease number of new HIV diagnoses by $\geq 25\%$

Measurement
Number of new HIV diagnoses during calendar year

Data Source
July 2020 IDPH Surveillance data for persons diagnosed in 2019

Baseline Data
2015 incidence (1,594) based on Aug 2019 dataset

6

Indicator 2 Progress

In 2019, there were 1,341 new diagnoses

7

Indicator 2 – Points of Consideration

- RIG funding for special activities to target highest incidence groups: Black and Latino MSM
- PrEP grants for 17 sites

8

Indicator 3: Reduce percentage of young gay & bisexual men who have engaged in HIV-risk behaviors by $\geq 10\%$

HIV-risk behavior: ever injected illegal drugs, ≥ 3 sexual partners in past 3 months, or no condom use last time having sex

Data: 2019 Youth Risk Behavior Survey

Baseline Data: 54% (2015 YRBS data)

9

10

Indicator 3 – Points of Consideration

- YRBS measures high school student risk; only in-school teens in grades 9-12
- Opportunity to fund behavioral risk reduction interventions for HS aged gay/bisexual men in FY22-24 RIG grant
- SB2762 would require comprehensive sex ed to include “the health needs of individuals who are intersex or individuals of diverse sexual orientations, gender identities or gender expressions”

11

Measurement

Cases aged ≥ 13 w/
documented CD4 or VL w/in 30
days of diagnosis

Data Source

July 2020 IDPH Surveillance
data for persons diagnosed in
2019, supplemented w/ IL
Ryan White lab data (as of
8/4/20)

Baseline Data

77.4%; 2015 incidence data

Indicator 4: Increase percentage of newly diagnosed persons linked to HIV medical care within 1 month of HIV diagnosis to $\geq 85\%$

12

Progress Towards Annual Targets for Indicator 4

In 2019, 80.2% of newly diagnosed persons were linked to care within 1 month of diagnosis

13

Points of Consideration

Indicator 4

- Physician report card
- Stronger incentive for linkage to care in future grants
- Medicaid data may provide a more accurate picture

14

Indicator 5: Increase percentage of persons diagnosed with HIV that are retained in HIV medical care to $\geq 90\%$

Measurement

Cases aged ≥ 13 diagnosed by previous year-end with ≥ 2 CD4/VLs > 90 days apart in calendar year

Data Source

July 2020 IDPH Surveillance data for persons diagnosed thru 12/31/18, supplemented w/ IL Ryan White lab data (as of 8/5/20)

Baseline Data

46.9%; persons diagnosed on or before 12/31/14, alive & residing in IL as of 12/31/15

15

Progress Towards Annual Targets for Indicator 5

In 2019, 47.5% of persons diagnosed with HIV were retained in care

16

Indicator 5

Points of Consideration

- Cases moved out of IL
- Analysis by facility; report card
 - Educate clinicians outside of Ryan White
- Labs tab in Provide

17

Indicator 6

Increase percentage of persons with diagnosed HIV who are virally suppressed to $\geq 80\%$

Measurement:
 Cases aged ≥ 13 diagnosed by previous year-end, most recent VL in calendar year < 200 copies/mL

Data Source
 July 2020 IDPH Surveillance data for persons diagnosed on or before 12/31/18, supplemented w/ IL Ryan White lab data (as of 8/4/20)

Baseline Data
 51.6%; persons diagnosed on or before 12/31/14, alive & residing in IL as of 12/31/15

18

Progress Towards Annual Targets for Indicator 6

In 2019, 58.8% of people with diagnosed HIV were virally suppressed

19

Indicator 6 - Points of Consideration

- Cases moved out of IL
- Analysis by facility; report card
 - Educate clinicians outside of Ryan White
- Labs tab in Provide

20

Reduce percentage of persons in HIV medical care who are homeless to ≤ 5%

- Measurement
- Cases aged ≥ 18, received outpatient HIV medical care between Jan-Apr & reported homelessness in prior 12 months
- Homelessness: living on street, in a shelter, in single-room occupancy hotel, or in a car
- Data Source
- 2018 IL & Chicago Medical Monitoring Project (MMP) data
- Baseline Data
- 7.3%; 2015 reweighted MMP data

21

Progress Towards Annual Targets for Indicator 7

Most recent data suggests 13.8% of people in HIV medical care were homeless

22

Indicator 7

Points of Consideration

- MMP sampling
- Data indicate Illinois homelessness in general trending down

23

Measurement:

Number of deaths in 2017 for persons diagnosed & aged ≥ 13 by 12/31/16 & for persons diagnosed in 2017 & aged ≥ 13 at diagnosis

Indicator 8: Reduce death rate among persons with diagnosed HIV by $\geq 33\%$

Data Source:

July 2020 IDPH Surveillance data

Baseline Data:

14.9 per 1,000 persons; 2013 death rate

24

Progress Towards Annual Targets for Indicator 8

The estimated death rate in 2017 among persons diagnosed with HIV was 14.5 per 1,000 persons

25

Indicator 8 – Points of Consideration

- Includes deaths from all causes
- Aging PLWH population will cause increasing mortality
- Opioid crisis?
- Analysis looking at other causes of death

26

Indicator 9: Reduce disparities in rate of new diagnoses by $\geq 15\%$ for gay and bisexual men, young Black gay and bisexual men, and Black females

Measurement

Ratio of disparity rate to overall diagnosis rate for gay & bisexual men aged ≥ 13 , Black gay & bisexual men aged 13-24, & Black females aged ≥ 13
 MSM population size estimated using 6.9% adjustment factor (Purcell et al. 2012)

Data Source

July 2020 IDPH Surveillance data for persons diagnosed during 2019 & 2019 US Census Bureau estimates for IL

Baseline Data

2015 incidence data

27

**Progress Towards Annual Targets for Indicator 9
Gay & Bisexual Men**

In 2019, the estimated diagnosis disparity ratio for gay and bisexual men ≥ 13 years of age was 17.8

28

Progress Towards Annual Targets for Indicator 9 Young Black Gay & Bisexual Men

In 2019, the estimated diagnosis disparity ratio for young (ages 13-24) Black gay and bisexual men was 106.1

29

Progress Towards Annual Targets for Indicator 9 Black Females

In 2019, the estimated diagnosis disparity ratio for Black females ≥ 13 years of age was 0.80

30

Points of Consideration

- Reactivation of routine screening expansion grant should help rectify disparity for Black females
- RIG grants which target AA HRH planned to increase funding in FY22

Indicator 9

31

Increase percentage of HIV+ youth and persons who inject drugs (PWID) who are virally suppressed to $\geq 80\%$

Measurement

Persons (youth: aged 13-24; PWID: transmission category of IDU or MSM/IDU) diagnosed by previous year-end whose most recent VL in calendar year was <200 copies/mL

Indicator 10

Data Source

July 2020 IDPH Surveillance data for persons diagnosed on or before 12/31/18, supplemented w/ IL Ryan White lab data (as of 8/4/20)

Baseline Data

Persons diagnosed $\leq 12/31/14$, alive & residing in Illinois as of 12/31/15

32

Progress Towards Annual Targets for Indicator 10 Youth

In 2019, 56.4% of youth 13-24 years diagnosed with HIV were virally suppressed

33

Progress Towards Annual Targets for Indicator 10 PWID

In 2019, 53.2% of PWID diagnosed with HIV were virally suppressed

34

Indicator 10 – Points of Consideration

- Provider report card
 - Educate clinicians outside of Ryan White
 - Harm reduction programs – more navigation services

35

Indicator 11: Increase percentage of transgender women in HIV medical care who are virally suppressed to $\geq 90\%$

Measurement

- HIV+ transgender women aged ≥ 13
- ≥ 1 outpatient visit from a Ryan White provider
- ≥ 1 VL during measurement year, of which most recent showed suppression (< 200 copies/mL)

Data Source

- Provide® Enterprise data as of 8/19/20

Baseline Data

- 2016 Ryan White data

36

Progress Towards Annual Targets for Indicator 11

In 2019, 80.2% of transgender women in HIV medical care were virally suppressed

37

Indicator 11 – Points of Consideration

- Create a facility report card
- Protecting our Patients curriculum
- Lack of gender affirming care
- Focus group with transgender women

38

Indicator 12: Increase number of persons prescribed PrEP by ≥ 500%

Measurement

Estimated # of unique persons who had ≥ 1 day of prescribed TDF/FTC for PrEP in a year

Data Source

AIDSVu (aidsvu.org). Emory University, Rollins School of Public Health; accessed on 8/5/20

AIDSVu has revised numbers published; therefore, baseline and target numbers also revised

Baseline Data

1,860; 2014 AIDSVu PrEP data

39

Progress Towards Annual Targets for Indicator 12

Most recent data estimates 10,226 persons were prescribed PrEP in IL

40

- PrEP capacity building project is helping to achieve PrEP linkages
- PrEP linkages from IDPH risk-focused grants increased significantly

Indicator 12 – Points of Consideration

41

**Indicator 13:
Decrease stigma
among persons
diagnosed with HIV
by $\geq 25\%$**

STIGMA

Measurement
Median score of 10 item stigma scale (0 = no stigma, 100 = high stigma), for persons ≥ 18 years with diagnosed HIV infection living in IL

Data Source
2018 weighted Illinois and Chicago MMP data

Baseline Data
2015 reweighted MMP data

42

Example Stigma Questions

- I have lost friends by telling them I have HIV
- I am very careful who I tell that I have HIV
- Having HIV makes me feel that I'm a bad person
- Most people think that a person with HIV is disgusting

43

44

Indicator 13 – Points of Consideration

- Affirming care campaign & cultural competency training may reduce stigma experiences
- Stigma analyses to be conducted by Dr. Ma
 - Females had higher stigma score
- Living Positively – IHIPC newsletter

45
