Table of Contents

Appendixes	Appendix A:	<pre>Inert/Update Patients</pre>	44
	Appendix B:	Identify trade and generic vaccine names	45
	Appendix C:	<pre>Immunization insert/update/delete process</pre>	46
	Appendix D:	Sample HL7 Messages	47
		Minimum required elements	
		Required but may be empty elements	
		Financial Class	
		Immunization Funding Source	
		Deduction from VFC Inventory	

Vaccines for Children (VFC) providers:

I-CARE will need to maintain your VFC vaccine inventory for the on-line VFC ordering process. For determination of VFC inventory, I-CARE will use the below order to determine if vaccine is VFC. Lot Number (RXA-15) is required.

Dose-level Immunization VFC vaccine will be determined by order:

- a. Immunization Financial Class in OBX segment, if exists (see Appendix G);
- b. Patient Financial Class in PV1-20, if exists;

If none of the above is available I-CARE assumes vaccine is not VFC.

Fields needed to maintain accurate VFC inventory within I-CARE.

- OBX-3 (preferred) for VFC vaccine eligibility per dose or PV1.20 for VFC vaccine eligibility for the patient.
- RXA-3 Shot Administration Date
- RXA-5 CVX
- RXA-9 for new or historical immunizations. We will only deduct new immunizations from inventory.
- RXA-11 to determine which provider's inventory to deduct from. If this is not available we will default to the MSH-4.
- RXA-15 Lot Number
- **RXA-17** Manufacturer

All Messages

Spec Notes

[] = optional

{} = repeatable

R = required

RE = required but may be empty (in 2.3.1 RE = O)

O = optional

C = conditional

C(a/b) = multi-choice conditional

CE = conditional but may be empty

X = not supported

Batch Messages

VXU-V04 - Vaccination Record Update

ADT-A04 - Register a Patient

ADT-A28 - Add Person Information

ADT-A31 - Update Person Information

Real Time Messages

QBP-Q11 (v2.5.1) - Request Imm History

VXQ-V01 (v2.3.1) - Request Imm History

ADT-A29 - Delete Person Information

ADT-A40 - Merge Patient

Note: differences in v2.3.1 and v2.5.1 will be anotated in the specs. Specs are based on v2.3.1 and v2.5.1 except where indicated

Fields that are imported into I-CARE are highlighted in green.

Fields required in order to be imported into I-CARE are hightlighted in red.

Please note that HL7 required fields are in bold but are not necessarily mapped into the I-CARE Registry, but should be present in order to remain HL7 compliant.

VXQ^V01

*Please note these specifications are subject to change to meet current Illinois Department of Public Health policies.

Query for Vaccination Record

Segment	Cardinality	Usage	Field Name	Comment
MSH	[11]	R	Message Header Segment	Every message begins with an MSH.
QRD	[11]	R	Query Definition Segment	Every VXQ has one QRD segment.
				Every QRD segment in VXQ may have one or less QRF
[QRF]	[01]	0	Query Filter Segment	segments.

v2.3.1

VXX^V02

Response to Vaccination Query Returning Multiple PID Matches

Segment	Cardinality	Usage	Field Name	Comment
MSH	[11]	R	Message Header Segment	Every message begins with an MSH.
MSA	[11]	R	Message Acknowledgment	Every VXX has one MSA segment.
QRD	[11]	R	Query Definition Segment	Every VXX has one QRD segment.
[QRF]	[01]	0	Query Filter Segment	May have one or less QRF segments.
{	PATIENT b	egin		
PID	[11]	R	Patient Identification Segment	Each Patient Group will have only one PID segment.
[{NK1}]	[0*]	0	Next of Kin/Associated Parties	
}	PATIENT e	nd	•	

v2.3.1

v2.3.1

QBP^Q11

Request Immunization History

Segment	Cardinality	Usage	Field Name	Comment
MSH	[11]	R	Message Header Segment	Every message begins with an MSH.
QPD	[11]	R	Query Parameter Definition	Every QBP has one QPD segment.
[QBP begin)		
[]	[1*]	R		The Query Profile will specify the list of fields and their components in the order that they will be expected for this query.
]	QBP end			
				The Query Profile will list the segments that are expected
RCP	[11]	R	Response Control Parameter	to be returned in response to this query.

v2.5.1

Realtime QBP responses: RSP, ACK

RSP^K11

Return Candidate List

Segment	Cardinality	Usage	Field Name	Comment
MSH	[11]	R	Message Header Segment	Every message begins with an MSH.
MSA	[11]	R	Message Acknowledgment	Every RSP has one MSA segment.
[ERR]	[01]	0	Error	Include if there are errors.
QAK	[11]	R	Query Acknowledgment	
				This segment echoes the Query Parameter Definition
QPD	[11]	R	Query Parameter Definition	Segment sent in the requesting query.
[QBP begin			
				The specified segments and their contents as specified in
				the Segment Pattern from Query Profile, are returned
	[01]	0		here. May be null if no records returned.
]	QBP end			

v2.5.1

Realtime QBP responses: RSP, ACK

ICARE process to insert/update patients:

Key fields:

PID-3 – Patient ID List MSH-4 – Site ID

First ID in PID.3 list must be an unique Site Identifier for inserted/updated patient.

I-CARE will keep an unique Patient Identifier MSH-4 + PID-3.1 to identify this patient in the future.

I-CARE process to identify trade and generic vaccine names:

Key fields:

RXA-5 – Administered CVX Code RXA-17 – Manufacturer Code

I-CARE will try to find **trade** vaccine RXA-5 + RXA-17. If no trade vaccine is found, use RXA-5 to find **generic** vaccine for a particular CVX code.

I-CARE process to insert/update/delete shots:

Key fields:

PID-3 - Patient ID

ORC-3 – Shot Unique identifier – 16 characters free text ^ Site ID (optional) (available in HL7 ver. 2.5.1 only)

RXA-3 – Administered Date

RXA-5 – Administered Code – CVX code

RXA-11 - Facility - Facility ID, Name and Address

RXA-21 – Action code-RXA

MSH-4 – Site ID – HL7 site ID, assigned by I-CARE

Use RXA-11 if RXA-11 is not empty, otherwise use MSH.4

- 1. ORC-3 is not empty
 - a. ORC-3 belongs to I-CARE (example 9999999^ICARE) skip the shot.
 - b. ORC-3 does not belong to I-CARE (example 9999999)

Search for shot in I-CARE by PID-3 + RXA-11/MSH-4 + ORC-3.

If found the shot, update existing record, go to the end.

If did not find the shot, go to step 3.

- 2. ORC-3 is empty go to step 3.
- 3. Search for shot in I-CARE by PID-3 + RXA-11/MSH-4 + RXA-5 + RXA-3.

If found the shot, update existing record.

If did not find the shot, insert new record (including ORC.3 if ORC.3 is not empty).

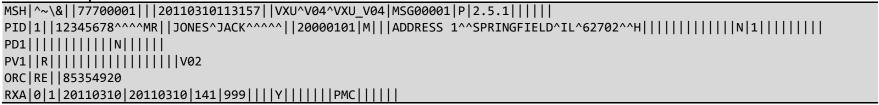

RXA-21 is ignored unless RXA-21 = "D". In this case I-CARE updates or inserts this shot as a "MARK FOR DELETION" shot.

If a site does not use ORC-3 and wants to update the shot administered code or administered date:

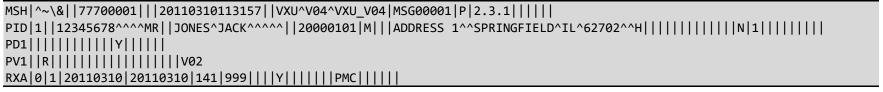

- 1. Site must send 2 RXA records: First record with RXA-21="D" (mark existing record for deletion) and second record with new administered code and/or administered date.
- 2. OR after updating existing shot through the HL7 interface (I-CARE will add a new shot into I-CARE with a new administered code and/or administered date), the site needs to use the I-CARE web interface to delete a shot with an old administered code and/or administered date.

Appendix D: Sample HL7 Messages

Minimum Required v2.5.1

Minimum Required v2.3.1

VXU^V04

Segment	Field	Length	Туре	Req/Opt	RP/#	Table	Item #	Element Name

These segments/elements are required but may be empty for VXU^V04 messages.

The segment/element may be missing from the message, but must be sent by the sending application if there is relevant data.

A conforming sending application must be capable of providing all "RE" segment/elements. If the conforming sending application knows the required values for the segment/element, then it must send that segment/element. If the conforming sending application does not know the required values, then that segment/element will be omitted.

I-CARE process rules for Financial Class:

Financial class references a client's eligibility status at the time of vaccine administration. It is the eligibility of the client for the vaccine administered.

Vaccine Financial Class - Use in OBX-3 to indicate that OBX-5 will contain the financial class of the patient at the time the vaccine was administered.

```
OBX-3: is set to LOINC code "64994-7" (Vaccine funding program eligibility category)
OBX-5: is set to HL70064 table
                  V01
                                     Not VFC eligible

```

Example

OBX|1|CE|64994-7|1|V04|||||F|||20090415

Vaccines for Children (VFC) providers:

I-CARE will need to maintain your VFC vaccine inventory for the on-line VFC ordering process. For determination of VFC inventory, I-CARE will use the below order to determine if vaccine is VFC. Lot Number (RXA-15) is required.

Dose-level Immunization VFC vaccine will be determined by order:

- a. Immunization Financial Class in OBX segment, if exists (see Appendix G);
- b. Patient Financial Class in PV1-20, if exists;

If none of the above is available I-CARE assumes vaccine is not VFC.

* Note: Assumptions for VFC vaccine are greater as order increases.

Using Funding Source is the recommended option.

I-CARE process rules for Immunization Funding Source:

The funding source may be linked to each immunization record, using an OBX segment. If no OBX segment with funding source is sent then we assume UNK - unknown

Vaccine Funding Source – Use in OBX-3 to indicate that OBX-5 will contain the funding source for a given immunization. The funding source of a vaccination indicates who paid for a given immunization.
